

PRESS RELEASE

Subsea 7 and Kumang Cluster Field, Malaysia: Successful collaborative two-well subsea development

OTC Asia, Kuala Lumpur Convention Center, Hall 2, #B202 - Subsea 7 has successfully installed the Kanowit Field subsea system for Petronas Carigali, part of the Kumang Cluster Development located 200km offshore Bintulu, Sarawak in a water depth of 79m.

The Kumang Cluster comprises 10 fields, including the Kanowit gas field. The project included a two-well subsea development tied back to the KAKG-A gas platform.

Subsea 7's involvement included a six month drill rig ROV support campaign, System Integration Testing (SIT) of all diverless structures in Port Klang, loadout, transportation and installation of christmas trees, structures, jumper spools, umbilical, flying leads, jumper protection covers, spool piece fabrication and pre-commissioning support. Commissioning start-up support was another key element of the project.

To complete this project, Subsea 7 used its Territory-based vessel *Rockwater 2* as the main construction vessel supported by chartered third-party vessels, as well as multiple AHTs and barges.

The offshore operations were completed safely in 2013, after three main campaigns comprising a total of 160 days of offshore operations for the main vessels and 284 days of operations for varying AHTs and barges.
